

Amendments to the Specification

Please insert the following new paragraph on page 1 at the next line below the (now amended) Title:

This application is a national stage application under 35 U.S.C. § 371 from PCT Application No. PCT/BG2004/002549, filed June 14, 2004.

Please insert the following paragraph header between at page 1, line 2:

FIELD OF THE INVENTION

Please insert the following paragraph header between at page 1, line 6:

BACKGROUND

Please insert the following paragraph header between at page 2, line 9:

SUMMARY

Please insert the following paragraph header between at page 7, line 22:

BRIEF DESCRIPTION OF THE DRAWINGS

Please insert the following paragraph header between at page 8, line 20:

DETAILED DESCRIPTION

Please insert the following paragraph on the next page after page 18:

ABSTRACT

A process for the manufacture of dispensing apparatus includes moulding a first component including a tubular outlet and moulding a second component about the first component. The first component is moulded in a first material and the second component is moulded in a second material, where the first material comprises a less rigid material than the second material. The first component is moulded with the tubular outlet in an open configuration and the moulding of the second component compresses the tubular outlet to a closed configuration. The tubular outlet is elastically deformable, by the application of pressure to the tubular outlet, from the closed configuration to the open configuration.
